

Primer catcher

For RCBS Rock Chucker / Rock Chucker 2

Congratulations to your new and improved primer catcher. Not only the larger capacity, or the option to let the spent primers directly drop into a waste basket, but also easier installation and removal and - if you ask us - a much better looking design are in your hands.

- Sturdy
- Easy to install
- Easy to remove
- Large capacity
- Option to drop primers directly into trash bin

and...

This primer catcher comes with a lifetime warranty: If it breaks during normal use and we still produce it, send us the broken one and we will replace it for free, no questions asked.

The installation is straight forward. Simply follow these steps (pictured is the standard model the case ejector one is being installed the same way):

Slide the primer catcher over the press

With primer catcher still up, attach cross bar

Press down cross bar on both sides

Press primer catcher down onto press

Primer catcher

For RCBS Rock Chucker / Rock Chucker 2

If you don't use the priming tool, removing the priming assembly and inserting the little plastic part could make operation of the press even cleaner (no chance for a spent primer to fall behind the primer assembly spring).

The installation is straight forward. Simply put in on the press like this and then install the primer catcher as described on the front page:

The other small part is intended for the slot in the ram but is completely optional to use. Some people had problems in the past with some primers leaving the ram very powerful and at an unusual angle – this little plastic piece will keep these primers within the slot. Adjusting the decapping pin so it is centered in the die will also prevent this from happening.
